

Announcing the New Institutional Animal Care & Use Committee Director

Dear Colleagues,

I am pleased to announce that Meredith Moore, Ph.D., has accepted the new role of Director, Institutional Animal Care & Use Committee (IACUC) Administration beginning September 1, 2017. Dr. Moore was selected after a national search, and brings significant experience and expertise in IACUC program administration from the University of Texas - Houston Health Sciences Center (UTHHSC) from which she also received her Ph.D. in Biomedical Science/Molecular Pathology.

During her tenure as the UTHHSC Assistant Director of the IACUC Office, Dr. Moore was responsible for managing the IACUC program administration, overseeing development of compliant protocols, assuring compliance with all animal regulations including facility/program inspections, developing policies, procedures and protocol submission systems to support faculty research efforts, and providing training, communication and metrics about the program.

With her own research experience and her progressive administrative leadership experience, Dr. Moore is well qualified to work with faculty, the IACUC Chair, veterinarians, and lab staff to assure delivery of high quality and compliant services to our faculty engaged in animal research.

As her start date approaches, we will assure that she is available to meet the research community as part of her early assessment and strategic planning efforts.

Denise McCartney
Associate Vice Chancellor for Research Administration
