

## The Longer Life Foundation

Call for Applications (LOI due 2/20/2018)

Q&A Information Session (01/17/2018)

The Longer Life Foundation supports studies that assist in predicting mortality and morbidity of selected populations, and methods to promote improvements in longevity and health.

These grants are specifically designed to encourage research by junior investigators or to support senior investigators who are beginning a new line of research. These awards provide up to \$60,000 per year for up to 2 years to support these missions. Further, hands-on mentorship to assist scientific development is provided to junior faculty who are beginning their research careers. These grants have proven highly effective at generating pilot data for junior investigators and in allowing them to successfully compete for funding from national agencies.

Applications are encouraged from all divisions and the grants funded are often quite diverse in nature.

Letters of Intent are due on February 20, 2018. Please submit via email to [rhauck@wustl.edu](mailto:rhauck@wustl.edu).

An interactive session with Dr. Dominic Reeds, Director of the Longer Life Center, and Dr. Dan Zimmerman, Managing Director of the Longer Life Foundation, will be held on **January 17, 2018 from 9:00 - 10:00 AM** in Room 301 of the Farrell Learning and Teaching Center. This Q&A session is offered to provide feedback on potential ideas for award applications, as well as technical details about the grant application and review processes.

The Call for Applications can be found [here](#). For more information please email [rhauck@wustl.edu](mailto:rhauck@wustl.edu).
