

## Advanced Summer Program for Investigation and Research Education

*ASPIRE summer research applications are open!*

The [Advanced Summer Program for Investigation and Research Education \(ASPIRE\)](#) at WashU School of Medicine in St. Louis has launched the medical and research careers of dozens of successful medical and health professionals. ASPIRE is a competitive summer research program for undergraduate students interested in medicine and clinical research. Participants work closely with a faculty research mentor full-time for two months (June and July), forming close professional connections and gaining a deep understanding of all aspects of the clinical research process. With coursework, professional development seminars, and social events, ASPIRE students emerge as engaged young investigators, prepared and eager to continue to contribute their talent and expertise to clinical research.
