

Now Accepting Fall Applications for Master of Science in Applied Health Behavior Research (AHBR)!

What is Applied Health Behavior Research?

- A multi-disciplinary approach to studying the health behaviors and their determinants that affect health outcomes and quality of life
- A field that applies psychology, public health, program evaluation, and statistics to promote health and prevent disease
- An important component in clinical research and treatment involving human participants

What can a Degree in Applied Health Behavior Research do for you?

- Shape your medical, research, or community-based career to incorporate the impact health behavior has on patient and population outcomes
- Build your network while working closely with coursemasters to reach your unique academic and career goals
- Provide mentored clinical research experience with renowned faculty from WashU School of Medicine

Part-time and Full-time Concentration Options

- Health Education, Program Planning and Evaluation
- Health Behavior Research
- One-Year Research Intensive: Health Behavior

Eligible for the [HR Tuition Benefit](#).
